

Q

What is the basic work flow for using TV for using TVP to shoot STOP MOTION ?

A

A good overview of using TVP for grabbing frames of stop motion is in this video.

The video was made using TVP 9 and we are now using a more recent version of TVP .. and some things are named abit differently in the TVP interface.. but this shows a general methodology or workflow that transfers from version to version.

"Video Grabber" (from 9.5) name has changed to "Video Input" in 10. , but other than that the function is the same for frame-grabbing into TVPaint.

http://www.youtube.com/watch?v=EMA_FSdwBkA

Or here (same video different server)

http://www.tvpaint.com/v2/content/article/support/includes/get_movie_html.php?id=35

ALSO students enrolled in ANM 180 should watch the MEDIA video that demos the software in the MEDIA file in MODULE ONE of the online class.
